

1. Pick 4 Schools of Psychology from our *schools of psychology* notes.
2. Create a User-Name for class use. (Ex: SiggyFreud)
3. Post 1 photo with a description for each school or pioneer (4 posts/descriptions total).

The photo must relate to each school. For example, Freud may post a picture of a young man with his mother and new wife. The photo must also have a description that ties it into the given school of psychology (2 sentence minimum). For example, Freud would post a short description pointing out how the wife must remind the young man of his mother because of his (the young man's) unconscious desire to find a woman similar to his mother.

An interesting option is to pick a picture of a metaphor for each school you choose. The evolutionary perspective for example, could have two people running against each other in a race. This makes us aware of the concept of successful adaptations that allow the likelihood of our survival - a "race for survival"

You may use a real Instagram account or another form of presentation software. You will deliver a short presentation to the class highlighting the 4 schools of psychology you picked. The project is supposed to help you better understand each school, so please do your best to accurately and adequately highlight those you select.
